

Properly Spaced

oj.dcs.upd.edu.ph/problem/properlyspaced

Problem Statement

We say that a string is *properly spaced* if:

- it does not contain two consecutive spaces anywhere,
- it does not contain any *leading* spaces, and
- it does not contain any *trailing* spaces.

Given a string *ss*, is it properly spaced?

Task Details

Your task is to implement a function named `is_properly_spaced`, which should look like this:

Copy

```
def is_properly_spaced(s):  
    return ...
```

Here, you only need to replace the `...` part with a **Python expression**.

The function must return a Boolean denoting the answer.

Your source code must have at most 150150 bytes.

Examples

Example 1 Function Call

Copy

```
is_properly_spaced("b a n a n a")
```

Example 1 Return Value

Copy

```
True
```

Example 2 Function Call

Copy

```
is_properly_spaced(" ba ba ba ba ba ba ba banana ")
```

Example 2 Return Value

Copy

```
False
```

Constraints

- The function `is_properly_spaced` will be called at most 10410^4 times.
- `ss` is a (possibly empty) string consisting of English letters and spaces of length at most 100100.

Scoring

Note: New tests may be added and all submissions may be rejudged at a later time. (All future tests will satisfy the constraints.)

- You get 5050 ❤️ points if you solve all test cases where:
 - `ss` contains no leading or trailing spaces.
- You get 150150 ❤️ points if you solve all test cases.
