

# Number Head - DCS Online Judge

---

[oj.dcs.upd.edu.ph/problem/numberhead](https://oj.dcs.upd.edu.ph/problem/numberhead)

## Problem Statement

---

Given a nonnegative integer  $n$ , return its first digit.

## Task Details

---

Your task is to implement a function named `number_head`, which should look like this:

Copy

```
def number_head(n):  
    return ...
```

Here, you only need to replace the `...` part with a **Python expression**.

The function must return an integer denoting the answer.

Your source code must have at most 7575 bytes.

## Examples

---

### Example 1 Function Call

Copy

```
number_head(123)
```

### Example 1 Return Value

Copy

```
1
```

## Constraints

---

- The function `number_head` will be called at most  $10410^4$  times.

- $0 \leq n \leq 10200 \leq n \leq 10^{20}$

## Scoring

---

**Note:** New tests may be added and all submissions may be rejudged at a later time. (All future tests will satisfy the constraints.)

- You get 5050  points if you solve all test cases where:
  - $n \leq 9$
- You get 5050  points if you solve all test cases where:
  - $n \geq 1$
- You get 100100  points if you solve all test cases.
